

Premium high-speed internet

Performance

High bandwidth and low latency

Availability

High-performance, resilient network

Coverage

A single data provider, nation-wide

Support

Australian-based business support

Features

Unlimited data

Download and upload without limits.

Dedicated speed

Uncontended (1:1) connectivity

Scalable bandwidth

Diverse speed options and deep network coverage allow you to increase bandwidth as needed:

- 1Mbps – 2Gbps
(fiber optic cables)
- 5Mbps to 50 Mbps (NBN ethernet over TC2)

Premium business continuity router

Enterprise-grade router suitable for advanced network configuration.

Features include:

- Wireless (4G) backup
- Network security
- Traffic segmentation
- Quality of Service (QoS)

National coverage

MyNetFone Ethernet gives you access to multiple high-speed fiber networks throughout metro and regional areas. Our vendor-agnostic approach gives you greater coverage with choice of speed, quality and price. All with the simplicity of a single provider.

Business benefits

MyNetFone Ethernet is designed for mid-size and large offices. It goes beyond standard broadband or NBN, enabling symmetrical upload and download, at speeds up to 1Gbps.

Enable UC and apps

Provide a reliable data backbone for high quality IP calling and cloud-based apps.

Multiple links

Support dual connections at the same site, suitable for segmentation or redundancy.

NBN-ready

Connect your sites using NBN ethernet (TC2) as well as our premium fiber options.

business.mynetfone.com.au

MyNetFone Ethernet services are not available in all areas. Availability confirmed through service qualification. Actual data speeds will vary based on a range of factors including distance from exchange, availability and quality of copper or fiber infrastructure, and on-site factors such as electrical interference, nature of customer cabling and use of RIM or pair gain.
